

WHAT IS CLAIMED IS

1. A reproducing apparatus, which is portable and installable on a vehicle, for outputting data recorded in a disk-shaped recording medium to recording means
5 comprising:

reproducing means for reproducing data recorded in said disk-shaped recording medium,

a sensor section for detecting a driving state of said vehicle, and

10 control means for changing a reproducing speed of said reproducing means based on the result detected by said sensor section.

2. A reproducing apparatus, which is portable and
15 installable on a vehicle, for outputting data recorded in a disk-shaped recording medium to recording means comprising:

reproducing means for reproducing data recorded in said disk-shaped recording medium,

20 a sensor section for detecting if said reproducing apparatus is installed on said vehicle, and

control means for changing a reproducing speed of said reproducing means based on the result detected by said sensor section.

25

3. A method for controlling a reproducing apparatus, which is portable and installable on a vehicle, for outputting data recorded on a disk-shaped recording medium to recording means comprising the steps of:

30 determinating a driving state of vehicle based on the result detected by a sensor section,

changing a reproducing speed of said reproducing means,
which reproduces data recorded in said disk-shaped recording
means according to the result detected by said determinating
step.

5

4. A method for controlling a reproducing apparatus, which
is portable and installable on a vehicle, for outputting data
recorded on a disk-shaped recording medium to recording means
comprising the steps of:

10 determinating if said reproducing apparatus is
installed on a vehicle based on the result detected by a sensor
section,

changing a reproducing speed of said reproducing means,
which reproduces data recorded in said disk-shaped recording
15 means according to the result detected by said determinating
step.

5. A controlling program to execute the predetermined
process by a computer that controls actions of a reproducing
20 apparatus, which is portable and installable on a vehicle,
for outputting data recorded on a disk-shaped recording
medium to recording means, wherein

said predetermined process comprising:

25 determinating a driving state of vehicle based on the
result detected by a sensor section,

changing a reproducing speed of said reproducing means,
which reproduces data recorded in said disk-shaped recording
means according to the result detected by said determinating
step.

30

6. A controlling program to execute the predetermined

process by a computer that controls actions of a reproducing apparatus, which is portable and installable on a vehicle, for outputting data recorded on a disk-shaped recording medium to recording means, wherein

5 said predetermined process comprising:

 determinating if said reproduction apparatus is installed on a vehicle based on the result detected by a sensor section,

 changing a reproducing speed of said reproducing means,
10 which reproduces data recorded in said disk-shaped recording means according to the result detected by said determinating step.
